PROFESSIONAL SUMMARY

Business analyst with experience in Australian logistics, FinTech and EdTech, working between business users, technical teams and customers to make systems and processes work better. Most recently worked as an IT and Business Systems Analyst for a South Australian logistics company, covering requirements, process mapping, UAT, feasibility analysis and automated reporting. Brings practical data skills in Python, SQL, Excel and Power BI, and earlier oversaw the digital marketing side of a company's education products as an operations manager. Now completing a Master of Information Technology (Enterprise Management) at Adelaide University.

KEY SKILLS

Business Analysis: Requirements Elicitation, Business Requirements Documents (BRD), Functional Specifications, User Stories, Acceptance Criteria, Process Mapping (BPMN, As-Is and To-Be), Gap Analysis, Feasibility and Risk Analysis, UAT, Business Case Development, End-User Documentation

Data and Programming: Python, SQL, Microsoft Excel (Pivot Tables, VLOOKUP, Data Modelling), Power BI, Tableau, KPI Dashboards, Automated Reporting

Digital Marketing: Campaign Performance Monitoring, Marketing KPIs and Reporting, Lead Tracking, Aligning Marketing with Sales Targets

Delivery and Operations: Agile and Scrum, Sprint Planning, Stakeholder Management, RAID Logs, SOPs, Lean Process Improvement, Change Management, Incident Management, Compliance (HACCP)

Tools: Jira, Confluence, Notion, Microsoft Dynamics 365, Zoho CRM, Trello, Microsoft 365, Lucidchart, Miro, Fleet Telematics Platforms

PROFESSIONAL EXPERIENCE

IT & Business Systems Analyst

Feb 2026 - Aug 2026

Fridge It Logistics SA | South Australia (Hybrid)

- Acted as the main link between the developer and business stakeholders with sign-off authority, turning business needs into clear requirements and acceptance criteria.
- Mapped current operational and compliance workflows across booking, transport management and telematics systems, finding manual handling points, data gaps and chances to automate.
- Led the feasibility analysis for a driver-hours automation project, flagging data reliability and integration risks such as device setup and identity mapping gaps before build, and recommended a phased rollout to reduce delivery risk.
- Designed and ran a structured UAT plan for a React, Node.js and MongoDB booking platform, logging, triaging and tracking defects through to sign-off.
- Set up automated reports in a fleet telematics platform to replace manual compliance and dwell-time reporting.
- Wrote end-user and administrator guides in plain language for each user group, making adoption easier and cutting training time.
- Managed the backlog and project tracking in Jira and Notion, giving stakeholders a clear view of scope, owners, status and blockers.
- Supported analysis of HACCP compliance evidence across delivery operations, working toward automated validation and exception reporting.
- Led a four-person Adelaide University capstone team on the same engagement, running fortnightly client workshops and writing the business case for the automated warehouse booking system.

Operations Manager
Oct 2023 - Jul 2024

Impact Academy Pvt. Ltd (EdTech)

- Mapped how work moved across product development, marketing and delivery, removed duplicate handoffs and introduced standard operating procedures for a 12-person team, improving project delivery efficiency by 58%.
- Monitored digital marketing for the academy's education products, reviewing campaign performance and lead numbers each week and using the results to decide where the sales team should focus.
- Lifted sales target attainment by 43% by building Excel tracking models with clear ownership, milestone checkpoints and weekly and monthly reviews that linked marketing activity to sales results.
- Set up Agile delivery from scratch, including sprint planning, task tracking and milestone reporting in Trello and Notion, cutting average project cycle time by around 30%.
- Built Gantt reports and KPI dashboards in Notion that gave management a live view of four projects running at the same time.
- Ran regular cross-functional meetings, pushed back on requests outside agreed priorities and kept a RAID log of risks, dependencies and decisions.
- Wrote SOPs, process guides and workflow templates so daily operations kept running smoothly after each project closed.

Business Analyst
Jul 2023 - Oct 2023

Spring Rain Pvt. Ltd (FinTech)

- Improved CRM efficiency by 15% by redesigning the support ticket workflow in Microsoft Dynamics 365, including intake, triage and prioritisation rules for a queue of more than 200 tickets a month.
- Cut complaint resolution time by 33% through structured UAT across 62 white-label products, keeping a defect register that showed recurring issues and shaped development priorities.
- Raised customer satisfaction scores by 11% by setting up a consistent way to find and fix issues, backed by standard test documentation and defect reviews with five internal teams.
- Gathered requirements through stakeholder interviews and workshops and turned them into BRDs, functional specifications, wireframes, user stories and acceptance criteria.
- Brought technical support, product and data analytics teams together to agree on scope and business rules where their priorities clashed.
- Supported sprint planning and backlog grooming with a distributed analytics team and presented fortnightly status updates to senior management.
- Acted as the main contact between technical teams and users during live incidents, explaining technical limits in plain language and following clear escalation steps.
